CONVERTERS FOR TINTING SYSTEM

MATTE

210-9096/XX for LIGHT matte colors

210-0503/XX for FULL SHADE matte colors

OECE has always been at the core of inspirations of interior design and architecture that, through the attractive power of color, transpose the suggestions into creations of the highest aesthetic level, giving a unique and lasting charm over time.

The **COLOREADY** tinting system is the tool that supports the customer in the realization and personalization of their own projects, with an immense choice of colors.

COLOREADY enables to quickly prepare any pigmented finish for wood in a simple, accurate and - above all - reproducible way.

The clear PU converters for interior have been designed for use in the painting of furniture, profiles, flat parts and all those wooden products that can make up the internal domestic furnishings.

Specifically formulated for the **COLOREADY** tinting system, they must be used only if added to the 241-XXXX solvent-based pastes. The volumetric mixing ratio must be 80/20 cc.

The addition of organic pigmented pastes implies a longer drying time, a lower hardness and a lower covering power compared to inorganic pigmented pastes.

CONVERTERS FOR TINTING SYSTEM

GLOSSY

212-9123/99 for LIGHT glossy colors

212-0523/99 for FULL SHADE glossy colors

These converters can be applied by air/airless spray and curtain coater, both with automated industrial systems and with manual systems most commonly used in the craft sector.

The matt or gloss finishes made with these converters give excellent chromatic coverage and good surface hardness, essential characteristics in the painting of the furniture, which are accompanied by an exceptional softness to the touch and ease of use.

The finishes created through the **COLOREADY** tinting system are the result of the best knowledge of the PU coating systems for wood.

The binders that make up our matt and gloss converters are made in Italy in the synthesis plants of Pianoro (BO), and contain an important part of raw materials deriving from sustainable sources.

This is one of the important aspects which describes the quality of any color obtained with the OECE neutral bases.

OECE: the creative attitude to shape **color**.
